

OPTEX

The Safe and Sound External Detection range

Your needs

The range of external products provides a simple, reliable and versatile option for adding external detection to your home. Whether you want to protect the car or van, your outbuildings or detect and deter intruders before they enter your home, these products provide a solution for you and are capable of operating as a stand-alone system or can be integrated with any existing system. In fact, these products are the perfect addition to existing internal alarm systems where detection has been limited to indoors. Their flexibility means you can design your system to monitor specific areas or control detection to a boundary or perimeter wall ...whatever suits your needs.

Pet Friendly

Your pets, and the neighbourhood wildlife, can also be catered for ensuring that you're not disturbed every time the neighbourhood Tomcat starts his patrol or Rover needs to go outside.

Warning

You can incorporate audio and visual indication to alert you in the event of activation or utilize the option of talking detectors to warn a potential intruder of their detection. Often an effective deterrent!

No Fuss

Installation is simple. As well as 'traditional' hard-wired products, we also offer a range of wireless detectors that can be placed anywhere in the garden – front or back – without having to do any ground work or lay cables. For fast installation, reliable performance and a wide range of products contact your installer today. With Optex your safety and security just got better.

Wireless VX402R and BX80NR

These wireless products provide reliable external detection as part of a stand-alone or integrated system. Wide angle or perimeter detection patterns are available and can allow for the movement of pets and wildlife.

VX402 REC

The VX402 REC is a talking detector capable of four operating modes incorporating two eight second voice warning messages. It can be used as a stand-alone device, with a controller or integrated with any existing systems. When used with a controller the external Voice Warning function and any internal audio warning can be operated as required. The unit can allow for the movement of pets and wildlife.

VX402/BX80N

The VX402/BX80N can be used as a stand-alone device, with a controller or integrated with existing systems. When used with a controller the external Audio Warning function (BX80N) and any internal audio warning can be operated as required. These units can allow for the movement of pets and wildlife.

Safe and Sound

External detection keeping your family safe from harm

Better detection

All-round protection

- An Englishman's home, so the saying has it, is his Castle. A castle in which he can feel safe, secure, and protect his family from harm. As with any 'castle', protection starts from the outside. Detecting 'unwanted' visitors once they are inside your home may be too late; stopping them from gaining entry in the first place is considerably more desirable, placing you and your family in significantly less danger. The external product range from Optex provides you with this level of security.

Making your home a safer environment

Detection and deterrent before entry

Some households already have a burglar (intruder) alarm system designed to activate when someone is in the house. But why let a burglar get that far? Why put you and your family at risk of confrontation? Wouldn't it be that much better if you could detect a burglar the moment they entered your garden or driveway, rather than waiting until they are in your lounge or bedroom?

Sophisticated detection device(s) placed in your garden or driveway will monitor specific areas and alert you to unwanted intruders, letting them – and you – know that they have been detected. Chances are, it will be enough to send them packing.

Out-buildings

Of course by securing the external areas of your home you are protecting your car and access to other valuables. What if the burglar has no interest in getting into your house, but wants easier pickings? The kids' bikes, that new lawnmower, those electric tools all have a value, and are easy to steal. Placing a detector near your shed, out of sight, will trigger an alarm, letting them know they have been spotted and make them think twice.

Safety

But it is not just about 'security'. It is also about 'safety'. Detectors can alert you to problems in the garden, a child too close to a pool or pond, or any of those other little areas where danger lurks. They can tell you when guests have arrived, or if the postman has been, and those other day-to-day comings and goings that help make 'securing' your castle that much easier.

Eliminating false alarms

Many households today have their own pets and those that don't can often end up with the neighbours' pets or wildlife in their garden. To prevent false activation due to these harmless visitors, specialised detectors use precision built lenses and filtering technology to discriminate between intruders, pets and wildlife. Precise detection areas are created and can be tailored to suit your individual environment conditions. The result is reliable outdoor detection that spots the cat burglars, but ignores the cats!

Thanks to our product innovation you can now secure the external areas of your home with an outdoor sensor that provides the same high-performance detection expected from detectors used inside the home.

Choice and flexibility

Optex, a leader in detection technology, has a range of detectors to suit different needs. Certain detectors can even talk, warning and deterring a potential intruder from proceeding further. The devices can be programmed with a variety of different messages either advising caution or providing a definite warning, depending on the application.

Independence

The product range can operate as a stand-alone system allowing you free movement around your home with the knowledge that your property is secured and your family safe. If requested, simple controls can provide you with audio and visual indication that helps you identify the area in which any activation occurs. Alternatively, the product range can operate as an integrated addition to any existing system but still maintain its simple operation while controlling lighting or CCTV systems.

Peace of mind

This external detection product range has been developed by Optex, a global manufacturer of sensor technology established in 1982. Optex products are synonymous with quality and performance and are utilized by leading security installers on a worldwide basis. Accepted by the security industry as having one of the most innovative development programs, Optex products provide cutting edge performance in numerous disciplines. From high security applications to commercial and residential installations, Optex products can be found providing the detection services.
